

INTERPRETING THE QRS MEASURE SET

- The Quality Rating System (QRS) is a quality reporting program that compares the performance of Qualified Health Plans (QHP) offered on Exchanges and accounts for both the quality of provided healthcare services and the health plan administration.
- Health plans can offer multiple products that vary by network type (HMO, PPO, or EPO), therefore the QRS measure results for 16 total plan products are reported.
- The data is listed by measurement year such that QRS measure data reflects the time period that the service or activity occurred.
- Only data for products meeting CMS participation criteria for QRS score eligibility are displayed in the tables. Blank cells indicate one of the following: (1) CMS participation criteria were not met for scoring because the health plan did not offer a product for two consecutive years through Covered California; (2) CMS participation criteria were met but denominator size for a given measure was below the minimum threshold for scoring; (3) the health plan chose not to report the measure as documented by the HEDIS® Compliance Auditor. The HEDIS® Compliance Auditor determines reportability and accuracy per the HEDIS® Compliance Audit standards.
- The percentile values provide benchmark information for measure rates for each respective measurement year, allowing a health plan to compare its results to all other health plans products nationally. CMS reports benchmark values that include the standardized 25th, 50th, 75th, and 90th percentile values for the numerical rates across all health plan products. To create these benchmark values, CMS uses only measure rates that have met the minimum denominator size criteria for scoring.
- QRS measure results for Measurement Year 2019 are a 'best of' Measurement Year 2018 or 2019. Covered California adopted this policy recognizing the COVID-19 pandemic's impact on quality measurement and to align with the approach of DHCS and NCQA for Measurement Year 2019. In order to implement this policy Covered California reviewed each measure result per plan product for Measurement Years 2018 and 2019 and displayed the result that indicated better performance. National benchmarks for Measurement Year 2019 are from Measurement Year 2018 as CMS did not produce national benchmarks for Measurement Year 2019.
- Color codes represent national performance percentiles while the numbers in the cell represent measure results. Measure results displayed here are rounded to the nearest hundredths for readability while the color-coding of each cell is based on the unrounded results. In some cases, the color-coding may not align with the rounded result as displayed.
- In some cases, the technical specification for each measure changes from year to year. When the changes are significant enough that results cannot be meaningfully compared to previous years, measure stewards indicate that a break in trending is required. Covered California has noted on those measures where measure stewards have indicated a break in trending is required.

POPULATION HEALTH

QUALITY RATING SYSTEM (QRS) MEASURE RESULTS

Performance Metrics

QUALITY RATING SYSTEM (QRS)

PERFORMANCE MEASURE	PAGE	PERFORMANCE MEASURE	PAGE	PERFORMANCE MEASURE	PAGE
Annual Dental Visit	4	Comprehensive Diabetes Care: Eye Exam	13	Proportion of Days Covered: Diabetes All Class	22
Asthma Medication Ratio	5	Comprehensive Diabetes Care: HbA1c Control	14	Proportion of Days Covered: RAS Antagonists	23
Breast Cancer Screening Rate	6	Comprehensive Diabetes Care: Nephropathy	15	Proportion of Days Covered: Statins	24
Cervical Cancer Screening	7	Controlling High Blood Pressure	16	Rating of All Health Care	25

Western Health Advantage HMO	3	4	3	4	1%	9,510	

- The Annual Dental Visit measure is the percentage of members 2–20 years of age who had at least one dental visit during the measurement year
- In MY 2021, seven out of 14 plan products scored below the 50th percentile of national performance, accounting for 32% of our enrollees
- Between MY 2020 and 2021, six plan products advanced to a higher percentile range
- MY 2021 performance below the 50th percentile means that fewer than 21% of members 2-20 years of age received an annual dental visit

Western Health Advantage HMO			71	75	1%	9,510	

- The Asthma Medication Ratio assesses adults and children 5–64 years of age who were identified as having persistent asthma and whether at least 50% of the medication they receive is ‘controller’ medications versus ‘rescue’ medications
- Controller medications are used to prevent asthma symptoms from getting worse while rescue medications are used for exacerbated incidents or emergencies.
- In MY 2021, 11 out of 13 plan products scored below the 50th percentile of national performance, accounting for 62% of our enrollees
- MY 2021 performance below the 50th percentile means that fewer than 80% of adults and children 5-64 years old with persistent asthma received controller medications at least half of the times that they received medication
- This measure was first implemented in MY 2020 and national benchmarks are new for MY 2021; a related measure with different specifications applied in previous years (Medication Management for People with Asthma)

Breast Cancer Screening

Western Health Advantage HMO	64	66	64	63	1%	9,510	

Trend with caution for all product lines

- The Breast Cancer Screening measure is the percentage of women 50-74 years of age who have received a mammogram to screen for breast cancer
- In MY 2021, 12 out of 15 plan products scored below the 50th percentile of national performance, accounting for 57% of our enrollees
- Between MY 2020 and 2021, one additional plan reached or exceeded the 90th percentile
- MY 2021 performance below the 50th percentile means that fewer than 68% of women 50-74 years of age received appropriate for breast cancer screening

Cervical Cancer Screening

- The Childhood Immunization Status measure is the percentage of children 2 years of age who had four diphtheria, tetanus and acellular pertussis (DTaP); three polio (IPV); one measles, mumps and rubella (MMR); three haemophilus influenza type B (HiB); three hepatitis B (HepB), one chicken pox (VZV); and four pneumococcal conjugate (PCV) vaccines by their second birthday
- The measure calculates a rate for each vaccine and one combination rate
- MY 2020 performance below the 50th percentile means that fewer than 76% of children 2 years of age reached appropriate childhood immunization status (Combo 3)
- The measure was updated after MY 2020. See next slide for the updated results starting in MY 2021

- The Chlamydia Screening measure is the percentage of women 16–24 years of age who were identified as sexually active and who had at least one test for chlamydia during the measurement year
- In MY 2021, zero of 13 plan products scored below the 50th percentile of national performance
- Between MY 2020 and MY 2021 four additional plans reached or exceeded the 50th percentile of national performance to bring all plans above the 50th percentile range
- MY 2021 performance below the 50th percentile means that fewer than 43% of women ages 16-24 received appropriate screening for chlamydia

Trend with caution for all product lines

- The percentage of members who had the following number of well-child visits with a PCP during the last 15 months.
- The measure calculates two rates: one for 6 or more well-child visits in the first 15 months and a second for 2 or more well-child visits for age 15 months – 30 months
- In MY 2021, eleven out of 12 plan products scored below the 50th percentile of national performance, accounting for 79% of our enrollees
- MY 2021 performance below the 50th percentile means that fewer than 78% of members who turned 15 or 30 months old received enough well-child visits with a PCP during the last 15 months
- MY 2020 is the first year this measure result is available because it reflects an evolution from the measures in the two following slides (Well-Child Visits Ages 0-15 Years)
