

## Appendix 2 to Attachment 7: Measurement Specifications

QHP Issuers shall use the following metrics to establish baseline measurements for Attachment 7 requirements and demonstrate improvement on each of these measurements over time. These metrics were reported in the 2017 Application for Certification or in subsequent data requests and must be reported according to the table below. Additionally, QHP Issuers must report these metrics as necessary upon Covered California’s request. Covered California and QHP Issuers shall work collaboratively during the term of this Agreement to enhance these specifications to further define the requirements. Hospitalization metrics for disparities measurement are to be reported as both ~~a composite metric of combined Prevention Quality Indicators (PQI) by condition as well as separately--reported standard Prevention Quality Indicator (PQI) (ambulatory sensitive admissions) measures and the composite metric of combined PQI, which is not a national standard.~~ Covered California will assess these two approaches during the baseline measurement years (2015 and 2016) and anticipates a smaller set of measures for measurement year 2017.
